Wednesday | February 13, 2008

12:15~1:30 p.m.

1203 Van Munching Hall

Clean Water Makes You Dirty: Water Supply and Sanitation Behavior in the Philippines

Daniel Bennett is a Ph.D. candidate in economics at Brown University who specializes in economic development and health economics. His research considers the role of externalities in problems of global public health. His most recent work examines how competition among physicians in Taiwan may encourage the use of antibiotics, and thereby contribute to antibiotic resistance. He holds an MA in economics from Brown University and a BA in economics from Swarthmore College.
